

Dektite Plumbing Flashings

Menzies Metal Products

If you are looking for a premium pipe flashing for a steep roof, we offer 4 models of Dektites. We'll cover specific applications here.

Dektites are Australian made

- All are multi-size. We carry up to 29”.
- All are designed for shallow or deep pitched roof.
- Made of EPDM or silicone.
- All have a soft metal ring on the flange to accommodate a tile or metal roof (one model is for shingled roof).

- All are listed to CSA except the SHR which is approved for use by the USA/Canadian Galvanized Pipe Association.
- All are listed to U.S. standards.
- All have a 20 year manufacturer's warranty.

Dektite Premium Black

- Non-opening hole design slides down over pipe.
- Made of EPDM.
- We carry 7 models covering from 1/4" to 14".

- The rest of the Dektites install 2 ways:
 - slide down over the pipe without cutting.
 - If there is an obstruction at the top of the pipe, slit along the seam, wrap around the pipe and seal the seam with the clips. This is a significant benefit when you are dealing with an obstruction on the pipe.

Dektite Retro Combo Silicone

- Made of red silicone which can withstand temperatures up to 250 C (482 F).
- Also withstands low temperatures to – 50 C (-58 F).
- We carry 7 models covering from 1 3/4” to 13”.
- This flashing is paintable.

Dektite Retro Combo Black

- Much like the silicone, except EPDM.
- We carry 9 models covering from 1 3/4" to 29".

Dektite SHR (shingle roof retro flashing)

- Features a larger metal flange (15" x 15").
- Made of EPDM.
- We carry 1 model fitting from 0" to 6".

Pipe diameter determines cut size of flashing. Cut size should be slightly smaller than pipe diameter, flashing should spread slightly for good seal.

If heat range is an issue, silicone flashing should be used whenever the pipe being sealed exhausts a heat source.

There is no flat roof application for Dektites products in Canada. CSA requires a 4" flange and 8" water height on roof flashings in a flat roof application.

Dektite flashings are a premium product designed for easy install and built to last.
