

## SPUN ALUMINUM FLAT PIPE FLASHING INSTALLATION INSTRUCTIONS

**Important: Read Instructions Before Installation.**

1. Remove any debris or materials that may prevent the pipe flashing flange from laying flush against the deck.
2. Lower the pipe flashing over the pipe, onto the roof deck. Ensure that metal flange is flush with roof surface.
3. The flashing flange must be secured to the roof deck using a minimum of 4 round head fasteners into solid substrate. Fastening evenly spaced, 1" from edge of flange, is optimal.
4. Follow the roofing system manufacturer's installation instructions for installing and flashing roofing material to pipe flashing.
5. Seal the flashing to the pipe with an appropriate cap or storm collar and sealant.
6. Adhere to the installation requirements as determined by the regulatory authorities for your region.
